Q1: Why a bitcoin address include public key instead of private key? Note: Use Diffie's rules to explain tour answer.

Q2: Which network arcitecture is used for Blcockchain? - Centralized - Distributed - Decentralized

Q3: Can Blockchain be run on existing Internet? Explain your answer

Ans:

1. because need to use the public key to encrypting, and know the address information we can pay for or transfer to correct person

2. Decentralized

3. no, because the most Blockchain application is not under the control, most of their usage is illegal. Also Miner is a important part of Blockchain, if no enough rewards, they may stop mining.
