Q1: Bitcoin has Transaction, Ethereum has Smart Contract. What are the major difference between them?

Q2: The 8 labs for Smart Contract Development are divided into three groups:
- Basic Concepts
- Medium Concpets
- Advanced Concepts

What is the major difference between Advanced Concepts and "Medium Concpets / Basic Concepts"

in terms of the testing environment?

Ans:

Q1.

Transaction is not programmable

Smart Contract is programmable

Q2.

Use different item (injected Web3) and DApp not the webpage, also experiment it on Ropsten
